

# Do you have a small baby between 32 and 37 weeks of pregnancy?

You could join the:

## TRUFFLE 2 Study

(TRial of Umbilical and Fetal FLow in Europe)

Small babies can have worse outcomes, however we currently don't know the best time to deliver them in late pregnancy.

We are running a multicentre European trial including 1600 pregnant women in more than 50 hospitals across Europe.

Participants are allocated either delivery immediately or they are monitored closely and delivered once there are other signs that might prompt concern.

We will assess how these babies are at birth, and their development to 2 years of age.

**Speak to your midwife or doctor if you think you might be interested.**
